WHAT IS YOUR DNA PROFILE?

A new world of Genetic Discovery

Your health is determined by a combination of factors - your genes, your environment, and your lifestyle. You can't change your genes, but you can make decisions to change your environment and lifestyle habits.

Knowing your genetic makeup can help you make the right choices and give you the tools for an improved quality of life.

See your DNA like never before

DNA holds the trigger for poor health, but it is the environment that pulls the trigger.

Genotyping enables new insights to your health and getting established with your genetic profile is the first step to taking charge of your life's environment.

GENETIC COUNSELING

All high precision genetic panel tests come with insightful counseling to help you plan and take control.

GENOTYPING

Genotyping is the process of determining which genetic variants an individual possesses. Genotyping requires prior knowledge of the variants you want to analyze and Quibble Genomics uses the best technology available on the market to give you the most. Quibble Genomics calls this a “basic genome” which is really where most people start.

Whole genome ideally captures all DNA including even the parts which the field of science hasn't determined exact purpose for. It really is the best thing you can acquire as it will have all the information and you will learn little by little every year and Quibble Genomics keeps you up-to-date.

SEQUENCING OPTIONS

Quibble Genomics offers options for differing budgets - basic Genotype or Whole Genome offer crucial DNA that is uniquely you!

CONVENIENT SAMPLE COLLECTION!

Phlebotomist services are available nationwide. Quibble Genomics operations will contact you to schedule a convenient time to collect your saliva or blood sample at a location of your choice or your home.

IMPROVING BIO SAMPLE QUALITY

Your bio-sample (saliva, blood) plays an important role and many providers delegate the risk to you to handle a spit-kit at home yourself. Quibble Genomics recommends a blood sample as saliva is not the best option for many causing further delays to your most important information about you or your patient.

A phlebotomist is a certified person that takes the hassle out of you doing all yourself as the expert comes to you to collect the sample. Alternately, you may choose to do it even quicker and visit the lab nearest to you for providing your sample. Call today for lab choices near you!
